Aviation On Time Performance in the United States

Team 07

- USDOT Open Data
- 13 millions Flight Records
- From 2014-07 to 2024-06

Average Delays by Quarter

- Arrival Delay follows the trend of the Departure Delay
- Delay Dropped to Negative during COVID
 Pilots Lay-off
- Average Arrival Delay Increased from
 ~7min in 2014 to ~12min in 2024 (70% Up)

Guiding Questions (Updated)

What are the most recurring reasons for flight delays and cancellations?

We aimed to discover the most frequent causes of flight delays and provide an analysis by

- 1. Airport
- 2. Airline
- 3. Routes
- 4. But only **Weather Data** turns out Promising

Airlines with a Hub and Spoke business model have higher flight delays and cancellations than those with a Point-Point model?

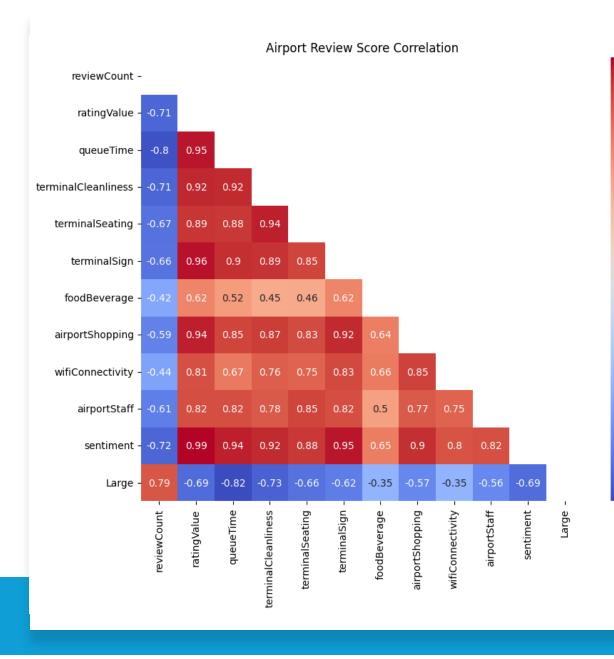

Very difficult to compare **Hub and Spoke** Routes Instead, we shifted to comparing the difference in time delay between **Origin and Destination City**

- 24 Airports
 - o 14 Large Hubs
 - o 10 Medium
- Their respective Reviews from Skytrax

Airport Review Quality

Hypothesis

Queue Time, Staff could lead to Delay

Obstacle:

- 0.75

- 0.50

- 0.25

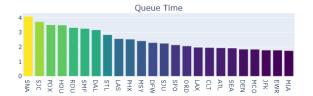

- 0.00

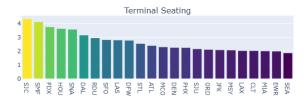

- Typical Bias in Review, More Review Lower Score
- The Busier the Airport, the Lower the Score Overall (except Food)

Future Action:

Gather Official Statistics about Performance

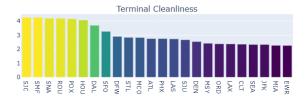

Individual Scoring Attributes of Airports

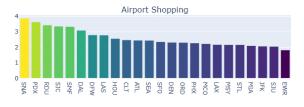

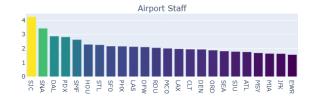

Airport Review Ranking

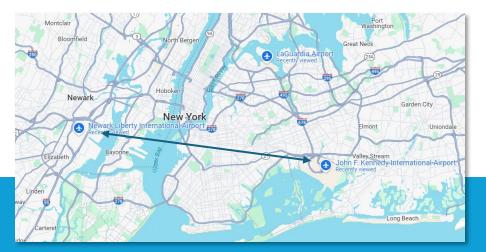

Top Airports

- PDX / SJC / SNA
- Medium Airports

(%) of Delay Flights by Airport All Flight Arrival Delay > 0 Arrival Delay > 60 Dal DEW MIA DEN ORD CLT HOU LAS MCO SFO LAX EWR PHX SEA SJU STL ATL SMF SJC MSY JFK RDU SNA PDX Airport Code

Origin Airport Arrival Delay %

- 1. Flight from SNA & PDX are both Well-Reviewed and On Time
- 2. JFK Better than EWR in NY

Airport Review Correlation with Delays

- Departure & Arrival Delay
 - Carrier

- 0.100

- 0.075

- 0.050

- 0.025

- 0.000

- -0.025

- -0.050

- -0.075

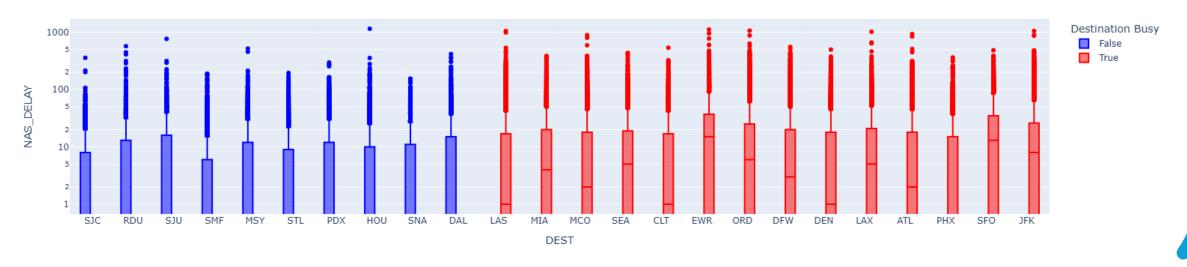

-0.100

- Weather
- National Airspace System (NAS)
- Security
- Late Aircraft
- NAS Delay Correlated with Destination Airport
 - Bigger the Airport > More NAS Delay
 - Heavy traffic volume/ Air traffic control

Destination Airport vs Delay

- Small Airports Destination has a Median NAS Delay of ~0min
- Big Hubs Destination has a Median NAS Delay of \sim 2 to 10min

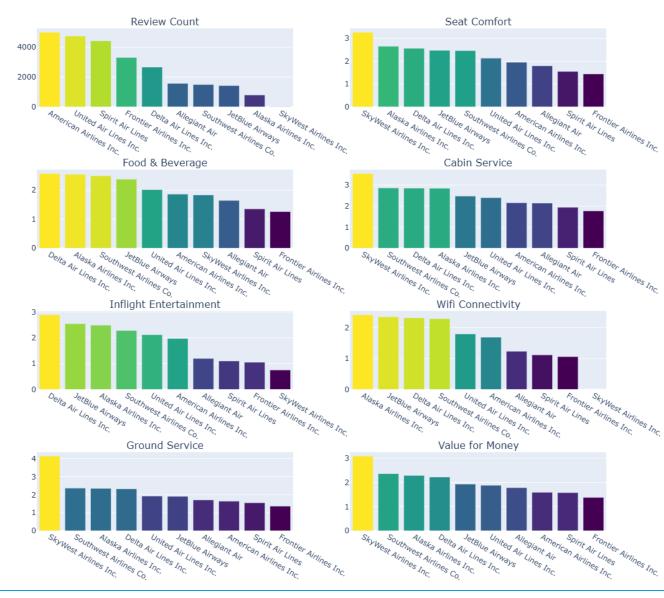

- 12 American Airlines
- Their respective Reviews from Skytrax

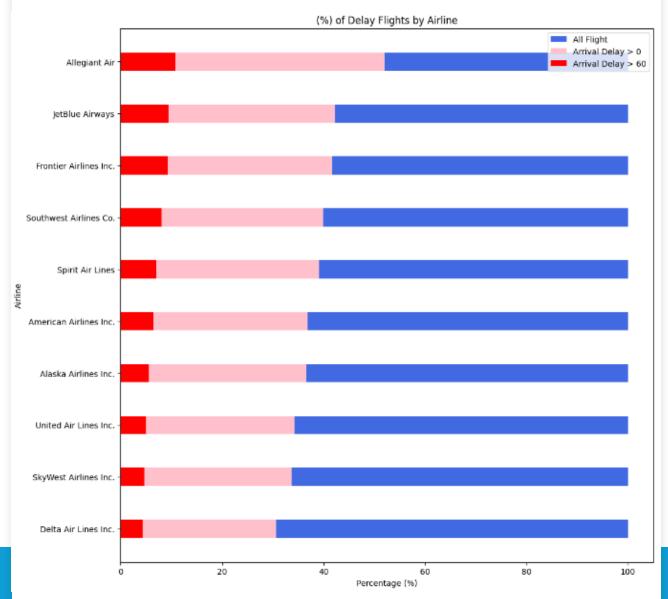

Individual Scoring Attributes of Airline

Airline Review Ranking

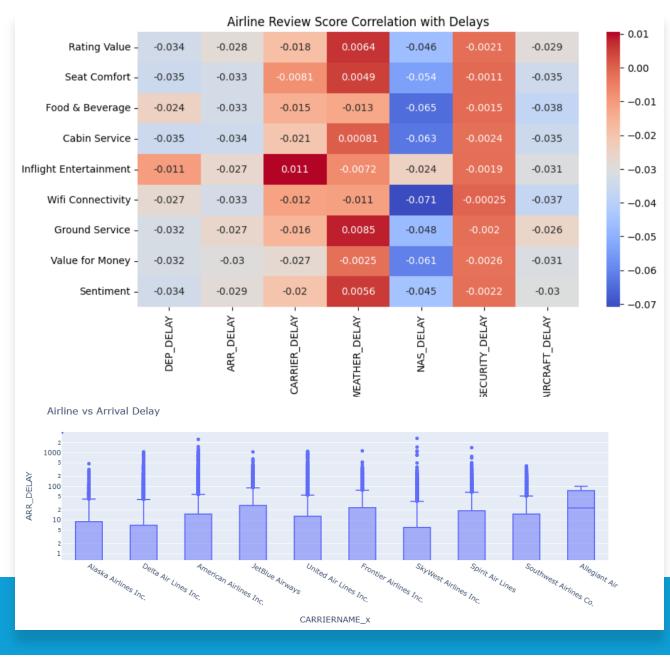

Top Airlines

- ~5,000 Reviews per Airlines
- Skywest appears well, but only got 41 Reviews
- Delta seems to be the Winner of Rating Overall
- Results more varied than Airport Reviews

Airline Arrival Delay %

- Delta is great for On-Time Performance
- Allegiant is disproportionately Bad

Airline Review Correlation with Delays

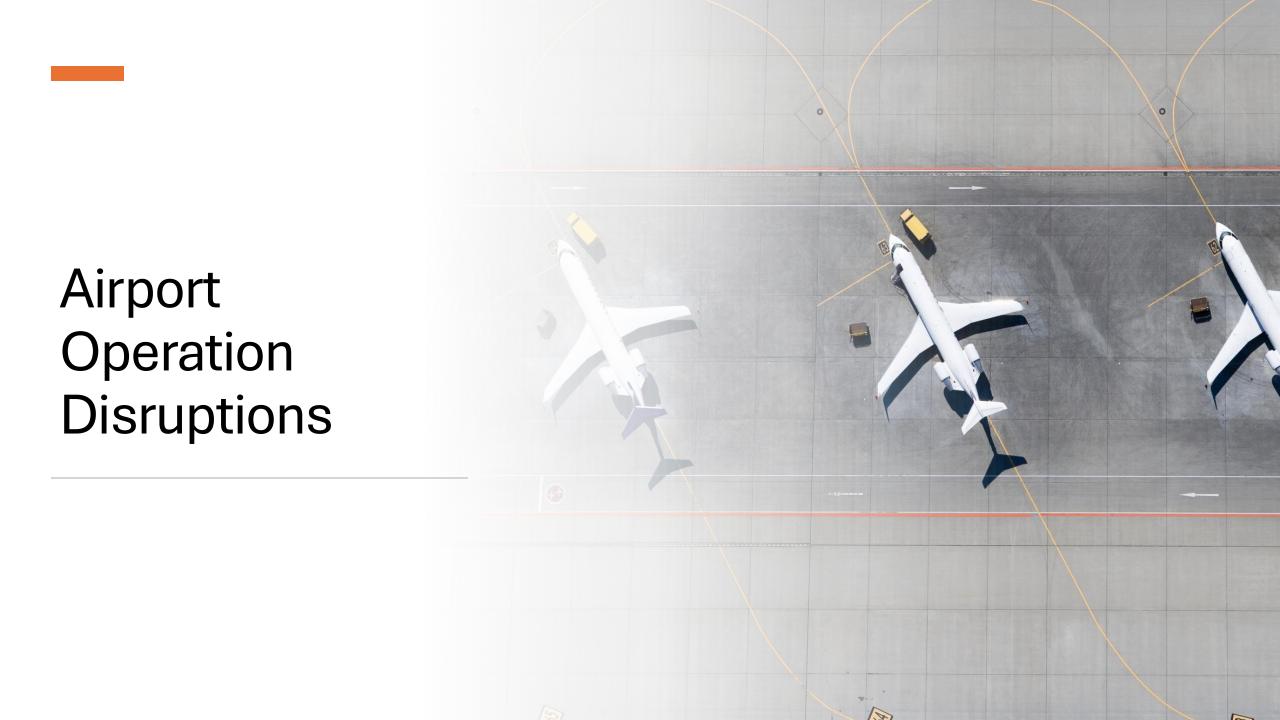

- Level of Service seems to reduce National Airspace System (NAS) Delay
- More Expensive Airlines > Less NAS Delay
- All Airlines have a Median Arrival Delay of 0
 - Except Allegiant > ~20min

Airline Cancellation

- JetBlue reports NAS Cancellation much more than others
- Allegiant cancels ~7% of their Flights, and >2% is for Security Reason

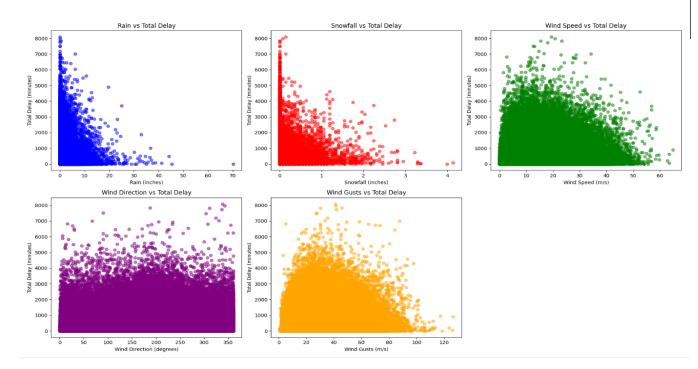

Airline Cancellation Code

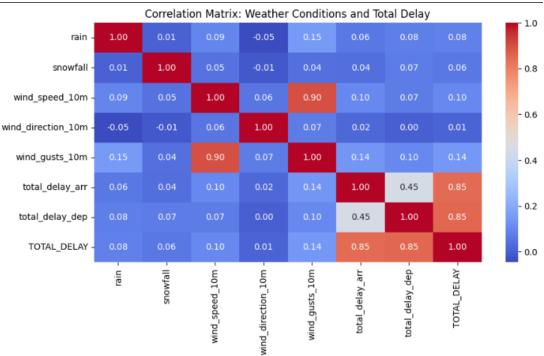

Relationship between Weather Conditions and Delays at Airports

- Weak Relationship between hourly weather conditions and ARR and DEP
- Wind Speeds and Gusts have a moderate impact on delays, relatively stronger on ARR delays

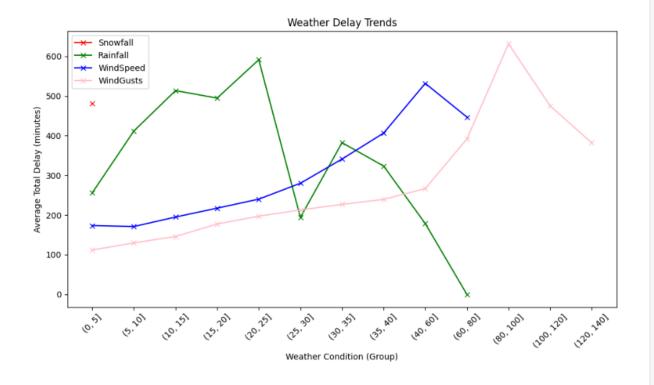

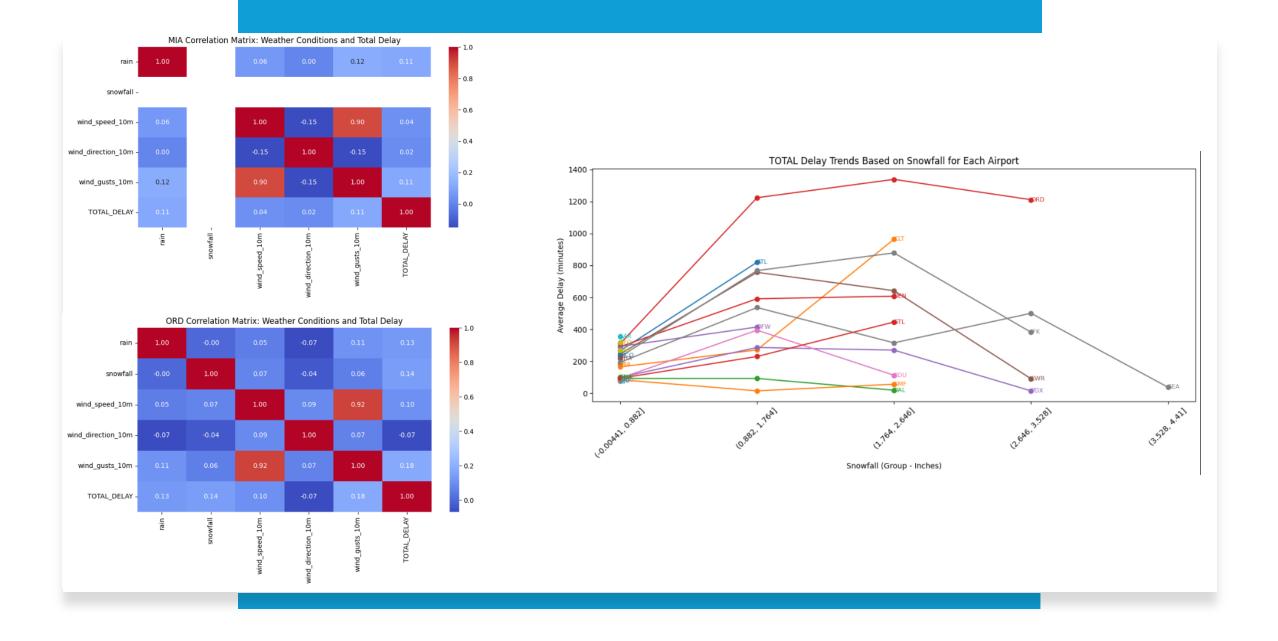

- Weather Conditions play a small role in the occurrence of delays
- Airline Operations, as well as infrastructure and human capital could be contributing to a larger extent

Weather Conditions and Delays Trends

- Increase in Wind Speed and Gusts are strong drivers of delay
- Drop after a certain threshold could mean that fewer data points exists at that range
- Snowfall does not occur at all airports
- Few extreme rainfall events

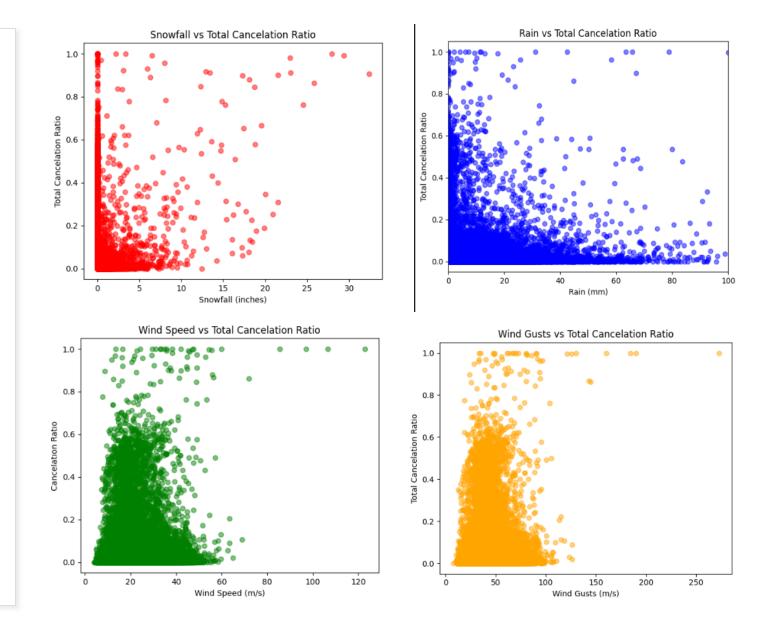

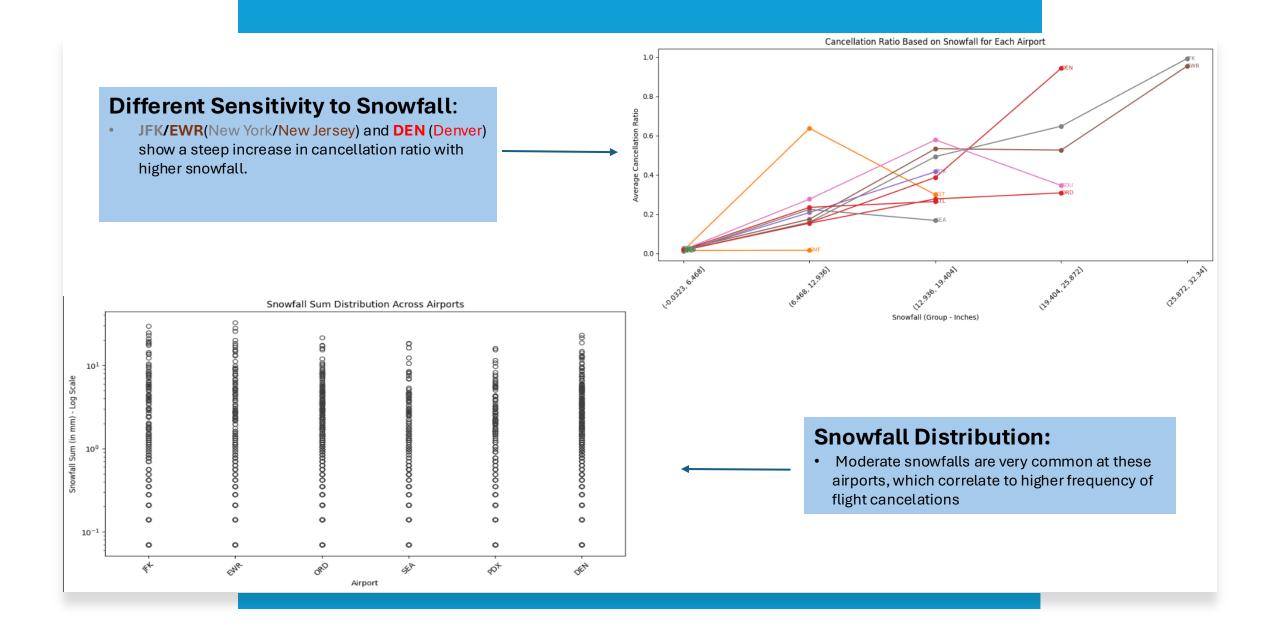

Weather Conditions and Delay Trends

Weather Conditions and Cancellations

- Snowfall has a significant impact on flight cancellations. In particular, heavy snowfall (more than 5 inches) consistently leads to a higher cancellation ratio.
- There is no strong upward trend that indicates a clear, linear correlation between rainfall and cancellations.

Weather Conditions and Cancellation Trends

Regression Analysis

Ridge Regression

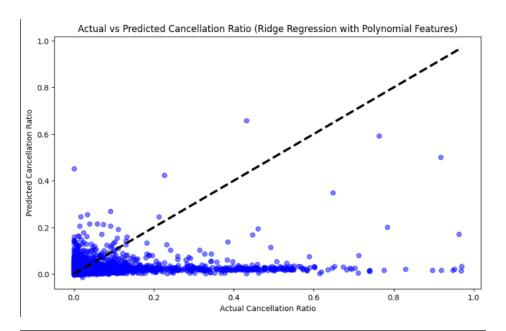

- Polynomial Features, given Non-Linear relationships observed
- Using Standard Scalar (0,1) and regularization to help prevent overfitting

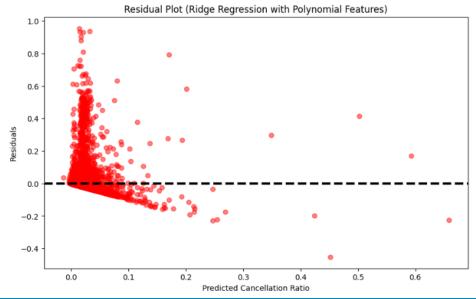

```
poly = PolynomialFeatures(degree=2, interaction_only=False, include_bias=False)
X_train_poly = poly.fit_transform(X_train_scaled)
X_test_poly = poly.transform(X_test_scaled)
✓ 0.0s
```

MSE: 3.46%

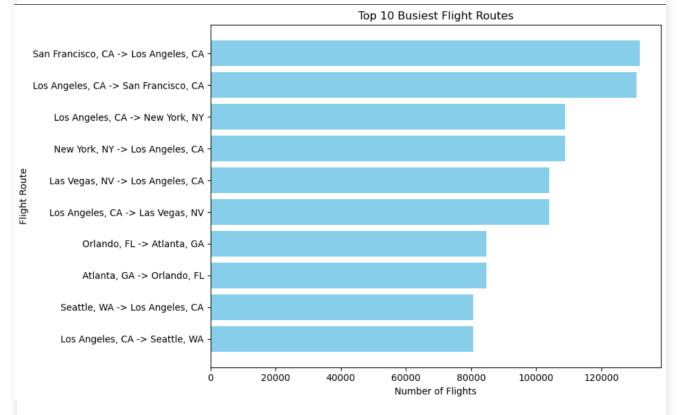

R-Squared: 0.049

	Feature	Coefficient
4	snowfall_sum	0.025039
3	rain_sum	-0.017247
21	weather_code rain_sum	0.014123
22	weather_code snowfall_sum	-0.009677
2	weather_code	0.006926

Top 10 Busy Routes

Hypothesis

Busier Routes -> More Delays

Aiport Departure Delay

Top 10 Busy Routes

Result

- Top 10 Busiest Routes all have median Delay of 0 min
- The Correlation is 0.4%
- i.e. SF to LA, >30 Flights per Day
- i.e. Houston -> NY, ~1 Flight per Day
- 5 min Delay Median
- >30 min 25% of the Time

Optimizing Arrival

Route	Alternative Arr Delay Median	Alternative Arr Delay Mean	Example Route Reliability (%)
Houston, TX -> New York, NY	-9.5	-7.283299	97.255575
Miami, FL -> Portland, OR	-9.0	-8.605536	99.029126
New York, NY -> Sacramento, CA	-5.0	-4.071500	94.410786
Newark, NJ -> Sacramento, CA	-5.0	-3.935500	97.435492
San Juan, PR -> New Orleans, LA	-5.0	-2.579310	99.315068

Alternative Route Algorithm ??

Test Case: <u>Top 5 Most Delayed Routes</u>

Optimizing Arrival Time

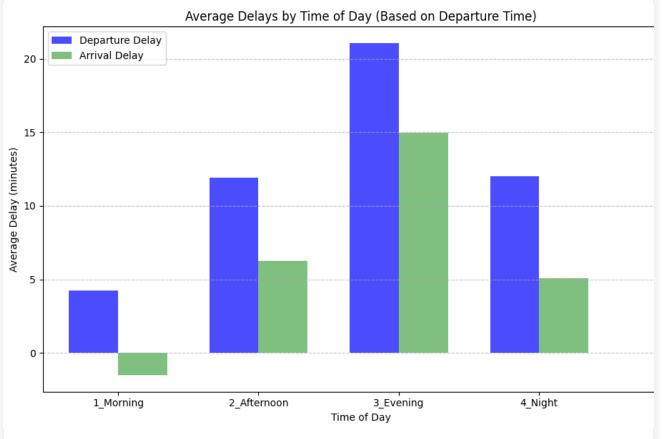

- Found Better Path in 0.25% of the Flights

Optimizing Delays Only

- Houston -> NY : Median Delay of 2min

- Houston -> New Orlean: Median Delay of -8min
- New Orlean -> NY: Median Delay of -4min

Miscellaneous Tips

When to Fly

- Morning (6am to 12pm)
- Avoid Evening Flights (6pm to 0am)

OBSTACLES

- Difficult to find data regarding uncontrollable events such as:
 - System Faults
 - Airport Closures/Incidents
- Low Variance in Airport/Airline Reviews
- The data that we collected does not provide an explanation on the relationship between perception and on-time performance

IMPROVEMENT

- Use Carrier specific data:
 - Employee Turnover Rate
- Labour Strike Frequencies

Time Sequence Data

- Flight before/ after
- Weather condition look-back

Ability to have accurate regression models
